Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a method of treating a protein deficiency comprising analyzing a sample comprising surfactant proteins, and preparing a medicament and administering the medicament to a subject having deficiency, is classified in class 514, subclasses 2.
- II. Claims 2-7, drawn to a medical device comprising an analysis unit for analyzing a sample comprising surfactant proteins, are classified in class 536, subclass 23.1, and class D24, subclasses 107.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the Group I process does not specify use of the device of Group for the analysis of the sample. The analytic material or equipment employed for analyzing the sample in the Group I process can be patentably distinct from the device of Group II.

Because these inventions are distinct for the reasons given above and since they have acquired a separate status in the art shown by their different classification and/or divergent subject matter, and/or are separately and independently searched, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1653

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
